PROFILE SUMMARY

- As a software developer, I take responsibility for the software development lifecycle and carry out.
- I have been actively involved in coding, bug fixing, testing, and documentation work in collaboration with senior developers and other team members.
- I adapt quickly and maintain a good routine, with a keen interest in learning the latest web and software technologies quickly.
- I am good in both as a team player and as an independent worker. My ultimate goal is to move up to the role of senior full-stack developer.
- My role as a Software Developer has enabled me to contribute to software projects and acquire invaluable insights into the development process.

EDUCATION

- Diploma in Engineering | Plastic Engg Government Polytechnic - Ahmedabad

EXPERIENCE

Orbitwebtech LLP (July 2022 - Aug 2025)

- Software Developer | Ahmedabad, Gujarat

Greaty design (1 Jun 2021-22)

- Front-end Developer | Rajkot, Gujarat

PROJECTS

1 PG365 Admin panel (React)

- I built an application in React version 16. The application's purpose is to search for PGs in your area. I created an admin panel for that application.

2 Goatlist Application (React)

- This is an eCommerce application. We fetch products from Amazon and list them in our application. Users can create a kit of products and place an order via Amazon.

3 forenam Application (React Native)

- It's a construction application. Within it, we manage buildings, their wings, floors, and offices, along with their dependencies. We also manage roles together.

4 Secuviz management system (React)

- In this application, we generate access cards for visitors, specifying which company and which department they will visit, and which employee they will meet with through gate entry. Additionally, the application manages the scheduling of meetings, including when and with whom the meeting is to be held, along with many other functionalities. It also manages roles and system logs, such as who and when created, edited, or deleted data.

5 Real estate Application (Svelte)

- I also worked on a Svelte project where I added modules like Data Tables, fixed some bugs, and added new functionality.

6 The Agency (Vue)

- I am familiar with Vue.js as well. In one project, I added some APIs and improved functionality.

7 Task base application and chat application

- In my free time, I created an application to learn Node.js. This application manages projects and tasks similar to ClickUp and Jira, featuring user authentication, project timelines, and task assignments. Additionally, I developed a chat application using WebSocket, which includes real-time messaging, user presence indicators, and chat room functionalities. Through these projects, I enhanced my skills in backend development, real-time communication, and full-stack application design.
